The BRUNES JEWEL

the newest in EVERBEARING STRAWBERRIES

It is a beautiful sight to see a field of the Brunès Jewel in full bloom and also when getting ripe. The pictures of this berry were taken about 90 days after setting out plants.

This berry was originated here at Pequot Lakes, Minnesota, where the mercury has gone down to 53 below zero and we have had no winter killing of plants so far.

The berries are well shaped and will grow to a very large size with fine color and flavor.

All our plants are inspected two times yearly.

Anyone who is interested in growing a strawberry that can produce big crops spring, summer and fall will do well to start raising the Brunès Jewel.

Try this new berry and you will find it a money maker. It is easy to grow acres of them as they need only ordinary care to produce a good crop of both berries and runners.

The Brunès Jewel was originated by Chas. Brunès — Originator and grower of new everbearing strawberries.

Postpaid prices on Brunès Jewel plants:

50 for \$7.00	
100 to 500	\$12.00 per 100
1000	\$10.00 per 100 (not prepaid)
No order taken for less than 25 plants. \$4.00	

We are again having the pleasure of originating and introducing a brand new everbearing strawberry and offering it to the public for the first time.

After 15 years of producing thousands of strawberry seedlings, this special one was chosen after proving itself to be a heavy yielder of fine quality fruit over a period of 9 years.

We have a nice lot of young plants which we are putting on the market this season. The Brunès Jewel is of good size as shown elsewhere in this folder, 32 selected berries filled a quart box, and the average size is very good. Our customers who come to buy them from our roadside stand here, praise the quality of this strawberry and for preserves they are tops.

BRUNES STRAWBERRY NURSERY

PEQUOT LAKES MINNESOTA

We sell thousands of quarts of strawberries each season to our tourist trade at our roadside stand at Pequot Lakes.

OUR GUARANTEE

We guarantee every plant sold by us to be free from any injurious diseases or insects and true to name, and will replace any plants that are otherwise. It is agreed between ourselves and our customers that we shall not be liable for a greater sum than the amount paid us for plants, and will not be responsible for crop failure or damage by weather. We reserve the right to return money in case of a shortage of plants.

Growing Instructions

Plant strawberries as early in the spring as the ground can be worked. Start cultivating and hoeing as soon as planted. Cultivate all summer and keep the weeds out. If possible water them in the EVENING in dry weather. Have the rows 3 to 4 feet apart and plant 18 to 20 inches in the row. Keep the bud clusters off from 6 to 7 weeks after planting, then let them bear the rest of the summer. Keep most of the runners off if only berries are wanted.

Be sure to thin out Everbearing strawberries the second season when they are matted. Thin down to very narrow rows, about 6 inches wide, and you will get more and larger berries.

Care of Plants

Packing for shipment. We pack strawberry plants in fresh moss so they will reach you in the best of condition, and if taken care of as soon as they arrive you will have little or no loss after planting.

When the plants arrive cut the string around them, dip the roots in water and heel them into the ground until you are ready to set them out.
